METHOD AND APPARATUS FOR PERFORMING FAILURE RECOVERY IN A JAVA PLATFORM

5 **ABSTRACT OF THE DISCLOSURE**

An invention is disclosed for performing failure recovery in a Java platform. An application is executed that includes a service module and a control module. The control module includes application-specific polices for the application. When an error is detected in a system component, the detected error is reported to a runtime executive, and 10 the system component is isolated. The control module is then notified of the system component failure.
